year. On these occasions his parents take gifts of tea, noodles, and whatever else they can spare to the foster parents. During their visit the foster parents present the gift as an offering on the ancestral shrine and pray to their own ancestors, the guardians of the foster child. It is believed that this may help to offset the adverse effects of the child's own ancestors.

In spite of some treatments, such as blood letting and moxa cautery, which seem harsh to the unaccustomed observer, Taira people are extremely concerned about their sick. Illness, and most of all the need to remove the patient to the local dispensary or to a hospital in town, involves the whole family. No one likes to leave a sick person alone. His family and friends attend to him in such numbers that the small rooms are never large enough to hold all. The security given in everyday life by the presence of relatives and neighbors in the village continues during the critical period of illness. In the case of a fisherman from the south who was washed ashore in his boat after a storm, township officials kept the man continuous company in his dispensary room even though he was close to death. Female relatives cook meals and look after the comfort of a hospitalized person. This means that a young girl or an older woman will leave her usual work for days or weeks to attend the patient.

Because of intimacy in the home and visits to the sick, children are quite familiar with illness. A mother who has to go to the hospital takes her youngest child with her. After burning moxa weeds on her skin for two weeks had failed to cure a nephritic condition, one woman went to the hospital in town, taking her 8-months-old daughter although she did not have enough milk to nurse. The infant had to be given bottled milk prepared from cans. Meanwhile the older children remained under the care of their father.

There is, however, little concern with children who have minor ailments. A school child may be excused from attending classes. In one case a boy stayed home from school with stomach pains. He was happily playing with younger children in the street. One of the adult villagers walked past, stopped after seeing him, and inquired: "Why aren't you in school today?" When told by the boy that he had an upset stomach, the man ordered him to go home right away and stay inside or go to school. The boy's mother, although aware of her son's discomfort, did not pay any special attention to it.

Preventive medicine is officially the responsibility of the public health nurse. She advises people on proper preventive care, inocculates children against whooping cough, diphtheria, and other diseases. She also acts as an advisor to mothers on child care and occasionally helps with a birth if the doctor is unavailable. If a case is diagnosed as

744 tuberculosis, the public health nurse teaches the family how to treat the patient in the home by giving him rest and drugs provided through her. Isolation, though recommended, is not carried out effectively, as might be expected from the general treatment of sick in the village.

744 759 Like most public offices in Okinawa, the nurse's carries with it a large load of administrative duties. Between these and attending meetings and lectures at Nago hospital, there is relatively little time to cover the long distances between villages. Taira is fortunate to be the residence of the nurse, and when occasionally a nurse from another township comes to help her with inocculations, the children crowd around her and say "We want 'our' nurse to do it."

743 759 The dispensary, or small hospital, in Taira is owned and run by a former medical corps man in the Japanese Army, referred to as "doctor." After the war the government gave permission to a number of 758 former army medical personnel to practice on a limited scale in the [844] villages. The Taira practitioner takes the place of a midwife, gives first aid, and diagnoses simple illnesses. If there are no complications, a patient requesting medical care may be kept at the dispensary, where a family member and the doctor's "nurse," a young female servant, attend to all his needs. If the doctor is confronted with a complicated birth or a case requiring surgical skill, he refers the patient to a private [657] clinic in Nago or to the public hospital there. The township gives financial aid to the doctor to maintain his establishment.

757 Penicillin has become the doctor's stock in trade, and other antibiotics and drugs are liberally administered via the hypodermic needle. [278] But the doctor does not restrict himself entirely to the use of rec- [262] ognized Western medicines and practices. He may recommend special diets to which people have resorted for a long time, such as goat soup, [759] which is believed to cure colds. Although the doctor has a high status in the community, most persons do not rely on his advice alone but resort to other practitioners and their remedies.

[759] Until a few years ago a popular medical practitioner, the bush doctor, resided in Taira. After his death nobody took over his work, and now many people have to travel far to receive treatment from a bush doctor in another village. His methods primarily include the use of moxa cautery, burning mogusa weed on the patient's skin, and acupuncture by the use of a fine golden needle. He may also prescribe a certain diet and the use of special herbal remedies, which the patient prepares for himself. Those who have great confidence in the bush doctor's competence, particularly older persons, do not consult the Taira doctor at all.

758 In all their dealings with sickness and its prevention, Taira people are severely handicapped by their economic conditions. Even families

Taira

who have accepted them cannot afford to buy the recommended drugs. Furthermore, the choice between the bush doctor and the trained medical men in town is sometimes determined by lack of money to pay for the more expensive services.

Cleanliness of the village and general sanitation are theoretically under township control. Except for superficial biannual inspections, nothing much is done about them. Perhaps the Women's Association, once they carry out plans to take over this function, will be more effective.

There are several cases of physically deformed, mentally deficient, and mentally ill persons. A young man of about 20 years, born as an idiot or imbecile, lives in the back of his parents' house, protected from the gaze of outsiders. His family provides well for him, and when no stranger is around to embarrass the family, the grandfather may take him out to attend a village event. Another young man, who was normal, one day began to frighten his family and eventually the whole village by outbursts of violence. He attacked other persons and property. Nobody really knew how to cope with the situation, since the single mental hospital in Okinawa could not keep him longer than six months, and everybody realized that he was sick, not evil minded, when he broke bottles and other glassware in the village store. The family tried religious treatment and locked the man up but never for long, for he had intermittent periods of calm and seemingly rational behavior. Another man, during a busy day, complained of sudden headaches. Soon afterward he became severely depressed and attempted to commit suicide, quite an infrequent phenomenon in the Okinawan village.

Chapter 10

Formal Education

The Japanese school system, which was introduced to Okinawa in the 1880's, reached Taira by 1891. At that time a small school was established in the village. Some of its early graduates are still alive and re-
